

# Internet Multipath M O N I T O R I N G

With the future demise of Securitel and the need for a higher secure form of monitoring ART Security have committed to providing the latest technological answer to this problem.

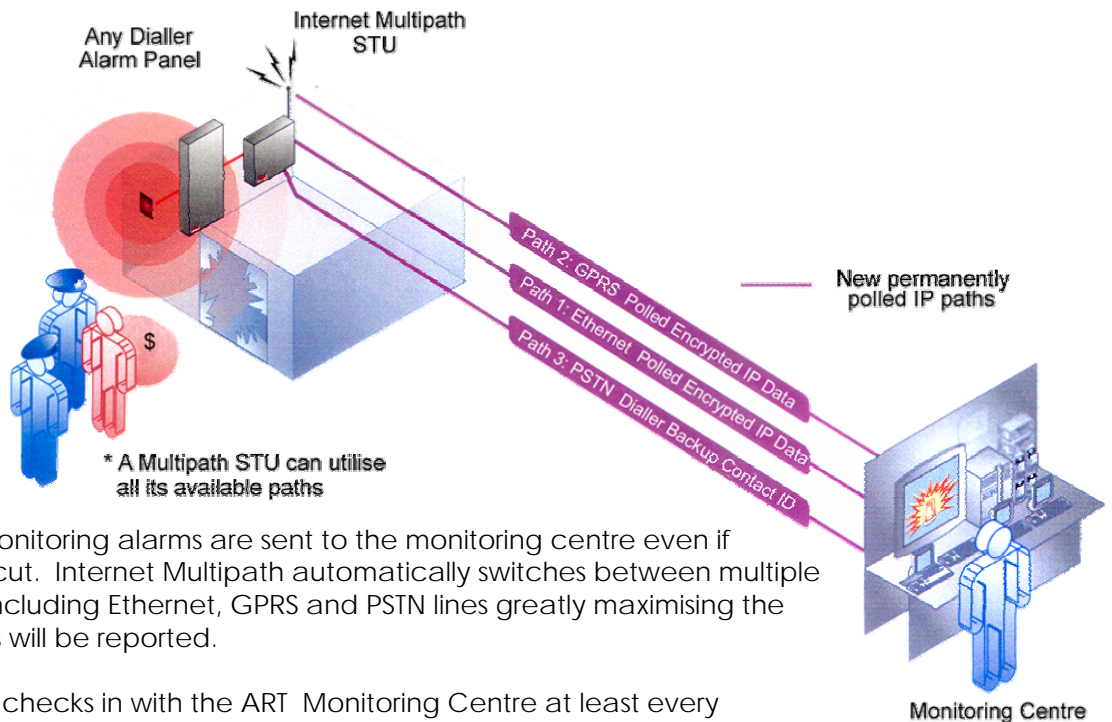

**Introducing Internet Multipath Monitoring** which utilizes all facets of the modern communications network – Internet, GPRS, PSTN.

**ART Security provides the ultimate protection of your critical assets**

- affordable, high security monitoring for commercial and domestic premises
- can be added to most existing alarm systems
- line integrity checks every 90 seconds
- multiple supervised alarm communications paths
- reduced phone costs and unwanted alarms
- typically less expensive than Securitel

If a smart intruder should attack your system's weakest link i.e. the telephone line between your system and the monitoring centre, then the latest in secure monitoring **Internet Monitoring** is the service for you

With Internet Multipath Monitoring alarms are sent to the monitoring centre even if your telephone lines are cut. Internet Multipath automatically switches between multiple communications routes including Ethernet, GPRS and PSTN lines greatly maximising the chances that your alarms will be reported.

Furthermore, this method checks in with the ART Monitoring Centre at least every 90 seconds, so you have up to the minute confirmation that your premises are safe ensuring **Peace of Mind**.

ART's Internet Monitoring alternative ensures your security system is capable of providing you with the optimum level of security cover at an **affordable price**.
